

Hi!

I'm Miyuki Niimi

web developer & web / graphic designer

I specialised mainly in programming and coding projects but because of my design background, I'm able to work in both fields when it comes to web development.

Ever since I started living in Japan from 2011 I'm fortunate enough to start working with local clients and companies based here. I usually use WordPress as framework of my choice for my projects but for the last 3 years, I started using other frameworks as well, like Vue.js for frontend and CakePHP for backend.

With my free time, I usually spend my hours reviewing my skills with online courses and helping startups with design and programming work.

Business Level

EXPERIENCE

2020

Freelance Software Engineer / Web Designer

Fukuoka, Japan

I'm open for new projects!

2020

Software Engineer

2017

[Glue Inc.](#), Fukuoka, Japan

Whether it was web development or design, I was given the task of working at both areas while focusing on our own in-house services and clients' web apps. I mainly used Vue.js and CakePHP for development and was given the opportunity to work with new technologies like WebRTC, Nuxt.js and Progressive Web Apps(PWA).

2017

Web Engineer

2016

[101DESIGN](#), Yamaguchi, Japan

We targeted small businesses and our project focused more on SEO and WordPress development. All projects that I was responsible for are fully utilized with gulp, modern CSS and are extensively modified to meet the needs of each client.

2016

Graphic Designer / Web Developer

2014

[SWITCHBOX](#), Yamaguchi, Japan

Worked mainly with design and graphics work. Along with creating illustrations, product catalogs and flyers, I was also responsible for web related development/design tasks. During this time, I was able to hone my skills as a designer while learning UI/UX with a mindset as a programmer.

2014

Contract Programmer

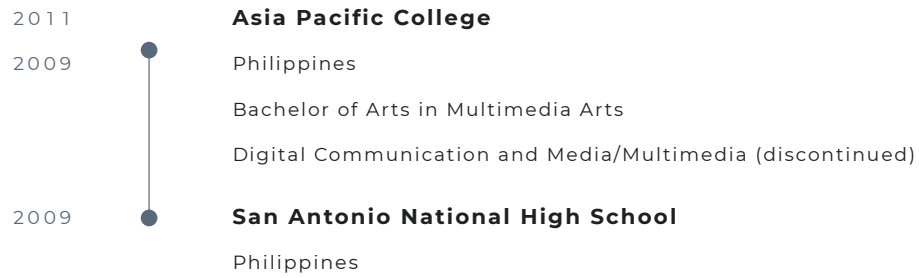

2013

[Ube Information Systems Inc.](#), Yamaguchi, Japan

Was responsible for operation and updating company and client based websites. Additionally, along with programming work, I was also tasked with website localization and realtime interpretation for international meetings. With the help of my English skills, I was also assigned as an IT support outside Japan.
